# SKY ACADEMY

# COMPLETE APP DESIGN REVIEW & CHANGE REQUIREMENTS

For: UI/UX Design Team, Product Team and Development Team | 18 October 2026

Review basis: SKY Academy Cricket App Redesign, 10-slide presentation provided for review. This document separates what is shown in that presentation from additional proposed requirements. The presentation is a visual concept, not proof that functionality has been built or validated.

Decision: Proceed with the overall visual language as a design direction, subject to substantial changes in product architecture, assessment methodology, parent experience, private coaching, security and operations. Do not treat these concepts as final approved screens or specifications.

## 1. Executive direction

Position SKY Academy as an integrated cricket-development ecosystem, not only a training catalogue or academy-booking app. The desired journey is Discover → Book → Train → Assess → Improve, with a persistent player record, a verified coaching loop and clear next actions for each user role.

- Retain the recognisable SKY branding, blue/white palette, strong cricket photography and approachable dashboards.
- Make the player’s development and next recommended action more prominent than promotional banners.
- Support four clearly separated role experiences: Player, Parent/Guardian, Coach and Academy Administrator.
- Introduce personal training at home, online coaching and private-venue sessions as a first-class booking journey.
- Treat proposed ratings, academy claims, statistics and mockup player data as illustrative until substantiated.

## 2. Slide-by-slide design review

Slides 1–3: Concept, navigation and user journey

Keep the single connected journey and five-destination structure. Define exact role-specific navigation, cross-role switching, account linking, onboarding and how a parent can manage multiple children. Use consistent terminology: Home / Train / Assess / Academy / Profile.

Slide 4: Onboarding, home, profile and assessment

Simplify the first screen; reduce oversized hero imagery on operational pages. Put next session, attendance, outstanding actions and progress above promotional material. Add age-appropriate player passport and parent-controlled permissions. Show assessment score definitions and source of match stats.

Slide 5: Academy discovery and trial booking

Add practical filters for age, location, coach, price, availability, coaching mode, language, distance and verified facilities. Show transparent cancellation/refund terms and trial availability. Avoid unverifiable

badges or review scores.

Slide 6: Training and assessments

Define consistent scoring rubrics, assessment frequency, video evidence, coach remarks, skill gaps and follow-up drills. Differentiate observed data from inferred recommendations; allow historical comparisons using consistent methods.

Slide 7: Catalogue, schedules and live training

Show reschedule/cancel, attendance, coach substitution, session notes and completed-session feedback. Live video, chat and recording must be permissioned and privacy-safe for minors.

Slide 8: Payments and notifications

Specify full payment states, taxes/receipts, refunds, subscription changes, failed payments and action-oriented notifications. Add parent approval for paid bookings.

Slide 9: Four roles

The deck names four roles but does not fully demonstrate each. Produce complete parent, coach and academy-admin screen flows and permissions, not just player mockups.

Slide 10: Summary

Expand from a visual blueprint into a phased product requirements document with success metrics, test cases, ownership and release acceptance criteria.

## 3. NEW: Personal coaching and home training (mandatory)

Core user story: A parent should be able to select their son or daughter, request a verified personal cricket coach, choose in-person training at home or a suitable private venue, or select a live online coaching session, pay securely, and track the child’s progress from the app.

- Entry points: “Book Personal Coach” on Parent Home, player profile, Train tab and assessment recommendations.
- Select child: support more than one child; show age, cricket role, goals, injury/fitness constraints if voluntarily provided and appropriate, and parent-approved training history.
- Choose mode: At Home / Private Ground or Nets / Live Online. For home sessions, collect serviceable locality, safe training space and equipment availability; exact address only after confirmed booking and only for authorised coach access.
- Choose goal: batting technique, bowling, fielding, fitness/conditioning, match preparation, beginner fundamentals or custom coaching.
- Coach matching: filter by verified qualifications, age-group experience, specialisation, language, location, rates, availability and parent reviews. Disclose verification criteria.
- Booking: trial or one-off session, recurring weekly plan, preferred days/times, session length, player-to-coach ratio, coach travel charges, equipment requirements, cancellation terms and price before payment.
- Confirmation: coach identity, session plan, location or secure online joining link, guardian contact, equipment checklist and reminders.
- Safety: guardian consent, coach identity/background verification appropriate to jurisdiction, check-in/check-out, emergency contact, clear safeguarding rules, incident reporting and a parent-visible escalation channel.
- Online training: secure live video with camera positioning guidance, drills appropriate for the home space, and no automatic recording without informed guardian consent.

- In-person training: attendance check-in/out, coach session notes, optional short drill videos only with guardian consent, and completion confirmation.

## 4. Parent monitoring, reviews and remote visibility

Parents must be able to follow the child’s development without needing to attend every session. Distinguish watching a live online session from watching an in-person session remotely: the latter requires a consented camera/video workflow and cannot be assumed to be available at every home or ground session.

- Parent dashboard: child switcher, upcoming sessions, session status, assigned coach, attendance, fees, progress and alerts.
- Session timeline: requested → coach accepted → confirmed → coach checked in → in progress → completed → review available.
- Remote view: optional parent-accessible live stream for an in-person session only where technically supported, all relevant parties consent, and privacy/safeguarding rules permit. Otherwise provide session status and post-session highlights.
- After every session: drills completed, coach observations, strengths, improvement areas, practice homework and next-session focus.
- Monthly progress report: baseline versus current skills, attendance, drill completion, coach commentary and goals for the following month.
- Parent review: rate punctuality, communication, coaching quality and child comfort; separate private safety reports from public coach reviews.
- Video library: date-stamped clips, consent controls, retention periods, authorised viewing and download restrictions.
- Two-way communication: parent-coach messaging within monitored, permissioned channels; no unsupervised direct messaging with minors.

## 5. New screens to design and prototype

- Parent Home + multiple-child selector; Child Development Overview; SKY Player Passport.
- Personal Coaching Landing; Coaching Mode Selection; Goal/Skill Intake; Coach Search/Match; Coach Profile and Verification.
- Availability Calendar; Session Package Comparison; Home-Space & Equipment Checklist; Booking Review and Payment.
- Booking Status/Tracking; Secure Live Online Coaching; Optional Parent Live View; Session Completion Summary.
- Session Video Highlights; Parent Feedback and Coach Rating; Progress Report; Rebook/Recurring Plan; Cancellation/Refund.
- Coach Dashboard; Coach Availability; Accept/Decline Request; Training Plan Builder; Attendance; Session Assessment and Video Upload.
- Academy Admin Dashboard; Coach Verification Queue; Scheduling/Capacity; Billing and Refunds; Safeguarding Incident Queue; Analytics.

## 6. SKY Player Passport and assessment engine

- Create a durable player ID, age-group history, batting/bowling style, goals, academy affiliations, coach history and consented media portfolio.

- Separate self-reported, coach-entered and independently verified match statistics; show provenance and correction workflows.
- Publish scoring rubrics for batting, bowling, fielding, fitness and game awareness, with age-appropriate baselines.
- Record assessment date, assessor, rubric version, supporting evidence, confidence/limitations and action plan.
- Trend views must compare like-for-like assessments; do not suggest percentages represent scientific precision without validation.
- Allow portable reports and controlled sharing with another academy or authorised scout, with guardian approval for minors.

## 7. Role-specific operational requirements

- Player: age-appropriate training plan, achievements, schedule, assessments and approved communication.
- Parent: child profiles, consent, booking/payment authority, progress monitoring, coaching requests and complaints.
- Coach: availability, session acceptance, lesson planning, assessments, attendance, feedback and payouts.
- Academy admin: programs, batches, staff access, capacity, enrolment, finance, quality assurance and reporting.
- Platform admin: coach verification, support tickets, content moderation, dispute handling, fraud checks and safeguarding escalation.

## 8. UX and visual changes

- Use one naming system across screens: “Train” and “Assess” in both navigation and headers.
- Reduce visual density and hero-banner repetition; prioritise the next action and information hierarchy.
- Show empty, loading, error, offline, declined, cancelled and completed states—not only ideal-state mockups.
- Ensure legible text, sufficient contrast, scalable font sizes, accessible tap targets and screen-reader labels.
- Avoid invented endorsements, rankings, academy ratings, player statistics and coach credentials in production designs.
- Keep onboarding concise: guardian consent and essential profile fields first; collect optional details progressively.

## 9. Trust, privacy and safety gates

These are product requirements to be reviewed with legal, safeguarding and security specialists before launch; this document is not a legal compliance opinion.

- Guardian verification and granular consent for child data, location, live streaming, recording and sharing.
- Role-based access control, audit logs, data retention/deletion, secure payments and incident response.
- Coach identity and qualification checks, child-protection training and explicit conduct policy.

- No public disclosure of child home addresses, precise live location or private contact details.
- Clear opt-in for any AI analysis; human review of consequential assessment or scouting decisions.

## 10. Commercial design and business model

Design configurable commercial flows rather than hard-coding pricing. Possible revenue lines include academy subscriptions, trial bookings, private coaching commissions, recurring coaching packages, paid assessments, training camps and premium video analysis. All commercial assumptions require separate validation.

- Display total payable price, taxes, coach travel/equipment charges and refund policy before checkout.
- Show coach/academy settlement and payout reporting on the administrator side.
- Support introductory trials, multi-session bundles, family accounts and authorised discounts.
- Track unit economics: booking conversion, repeat bookings, cancellations, coaching utilisation and refund rate.

## 11. Delivery priorities

| Phase | Required deliverables |
|---|---|
| P0 — redesign sign-off | Unified navigation; parent flows; private/home/online coaching journeys; booking/payment; safeguarding/consent; assessment rubrics; role permissions. |
| P1 — launch-ready MVP | Academy and coach discovery; scheduling; attendance; session reports; basic passport; parent dashboard; coach/admin tools; receipts/refunds; core analytics. |
| P2 — enhancement | Rich video annotation; detailed skill trends; verified match-stat integrations; packages and advanced recommendations. |
| P3 — expansion | Scouting ecosystem; portable verified talent records; institution partnerships; advanced AI analysis after validation. |

## 12. What the design team must submit for approval

- Updated site map and complete role-specific user journeys, including parent booking and post-session monitoring.
- High-fidelity mobile screens for every new module listed above; clickable prototypes for critical flows.
- Screen inventory with annotations for validation, error states, permissions, data fields and edge cases.
- Assessment scoring framework, coach verification workflow, consent/safeguarding flow and sample parent report.
- Design system: typography, colour, components, responsive behaviour and accessibility specifications.
- Implementation backlog by phase with effort estimates, dependencies and a proposed delivery timeline.
- A change log mapping every item in this review to the revised screen and its acceptance status.

## 13. Acceptance scenarios (demonstrate in prototype)

- A parent with two children books an at-home batting session for one child, receives full pricing, pays and gets confirmation.
- The coach accepts, checks in, completes the session and uploads a structured report; the parent sees it and books again.
- A parent books online coaching, joins securely, and reviews a consented session recording or notes afterwards.
- A home-training session has no live video available; the parent can still view status and a post-session report without a misleading “watch live” promise.
- A parent cancels a recurring session and sees the correct refund/reschedule outcome.
- A player changes academies and retains their consented historical passport without exposing private child information.
- An administrator reviews a safety complaint, restricts coach access if necessary and preserves an audit trail.

## 14. Suggested message to the design lead

Please review the attached SKY Academy design assessment and incorporate the listed changes in the next design iteration. In particular, personal coaching at home, online coaching, parent monitoring, post-session reviews and a measurable player-development passport must become core parts of the app. Kindly submit revised role-wise user journeys, new screens, a clickable prototype and a phased implementation plan, with each observation marked as addressed or requiring discussion. The existing visual direction can be retained, but the product experience must be more complete, practical, secure and scalable.

Prepared as a design review and requirements recommendation based on the supplied SKY Academy redesign presentation.
